

Model

ExtraTrees

Classes: FlexibleShaft, GeneratorFault, Healthy, Leakage, PumpDisplacement

Common signals: pressure, current, vdc, vac

Healthy: only 1 training run — predictions for those classes are usable but were not cross-validated. Treat their confidence with care.

Predictive Maintenance — Engine + Alternator + Hydraulic Pump

Operating-point-invariant fault classifier. Upload a Simulink log (.xlsx/.csv). The model reports Healthy vs fault type from scale-invariant + baseline-deviation features of the common signals.

Upload sensor log
